Deschutes Estuary Restoration Project

Supplemental Environmental Impact Statement Public Hearing

Washington State Department of Ecology

Washington State Department of Enterprise Services

ONLINE PUBLIC HEARING

November 3, 2026

Conducted Remotely via Zoom

Reporter: John M. S. Botelho, CCR, RPR

BE IT REMEMBERED that on Tuesday, November 3, 2026, at 5:50 p.m. Pacific time, before Fran Sant, Hearing Officer, the following public hearing was had, remotely via videoconference, to wit:

<<<<<< >>>>>>

HEARING OFFICER: All right. Now we're going to begin the formal hearing, where there's some information I need to read for the record.

My name is Fran Sant. I'm the hearing officer for this hearing. This evening, we are to conduct a hearing on the draft supplemental environmental impact statement for the Deschutes Estuary Restoration Project. As a hearing officer, my job is to conduct the hearing, and I have two main responsibilities. I need to make sure that everyone who wants to be able to provide oral testimony can do so, and I need to make sure we get a clear record of your testimony.

For those of you that are going to provide comment and raise your hand, can you please make sure that you minimize any background noise and that you

turn off your cell phone so it doesn't ring in the middle of your comment.

Please let the record show that it is 5:51 p.m. on November 3rd, and this hearing is being held online via the Zoom platform.

Notices of this hearing were mailed to approximately 350 interested people in the supplemental EIS study area. E-mail notices were sent to approximately 4,500 interested people. Notices were distributed to local libraries. Ecology and Department of Enterprise Services issued news releases on October 9th. And notices of this hearing were posted to both Ecology and Department of Enterprise Services public event calendars.

Notices of this hearing were also sent to the events calendars for Experience Olympia, JOLT, KNKX, The Olympian, and ThurstonTalk. And then notices of this hearing were published in The Olympian on October 11th and on October 14th, 2026.

I will be calling you up to provide comment or unmuting you to provide comment in the order I see your Zoom hand raised.

So now would be the opportunity for you to raise your hand to let us know that you would like to provide comment. And I am going to adjust my screen so I can

see those raised hands, so just give me just a moment.

All right. I am seeing one raised hand for "bb." We will go ahead and unmute you, and then you can provide your comment.

BONNIE BLESSING: Hello. Did I effectively unmute?

HEARING OFFICER: You did great. We're ready for you.

BONNIE BLESSING: Thank you.

My name is Bonnie Blessing. I visit Olympia quite frequently. I have about four total comments.

One is, I encourage traffic calming on West Bay. I recently had a puppy die on West Bay from traffic. And I have seen traffic go awfully fast. And I encourage traffic calming on West Bay to avoid impacts to people crossing near West Bay Rotary Park, in that general vicinity, to reduce impacts to people and people recreating along the area.

Secondly, there are at least three other projects along West Bay that are projected to, I believe, increase traffic, including truck traffic, from Tugboat Annie's and the dock there all the way back to Fourth Avenue Bridge. And I hope that those can be considered in the final EIS because it was going to add more traffic.

Thirdly, there's a lot of salmon now. And -- and I appreciate what everybody's doing to improve salmon habitat, but I don't want to decrease the number of salmon in the future as part of this project. Or just, like, can we really think about that?

And I'm sorry. Fourthly, I used to do some phytoplankton sampling. And I know that there's Dinophysis -- Dinophysis, D-i-n-o-p-h-y-s-i-s -- out in Budd Inlet. And that occurs in saltwater. And if the saltwater intrudes all the way up to the falls, will that bring -- I'm not seeing anything necessarily in the EIS that describes how Dinophysis might encroach all the way up into where Capitol Lake is.

And it -- Dinophysis is a harmful algae that occurs in saltwater that would now, I believe, have better conditions up in the -- up where there's only freshwater, I believe, up in Capitol Lake, all the way up to where the lower falls is.

And it's a harmful algae. It releases a toxin, unlike the existing algae, I believe, in Capitol Lake that are mainly, like, when they die, they lower the dissolved oxygen. But that's different from actual -- a toxin release.

And I really want to help the salmon. My only goal is the salmon. And I just want to encourage that

we understand how the algae and the dinoflagellates and the diatoms from Budd Inlet could enter all the way up to the lower falls, I believe, because that's where the tidal range could go.

And then assess -- a really good assessment of how the food in Capitol Lake for wildlife and fish could change as a result of saltwater. There's different algae and phytoplankton in saltwater than in freshwater, and I believe the saltwater will go all the way up to the falls. And I just want to encourage you to understand that there's a difference between the freshwater diatoms, dinoflagellates and diatoms, and the saltwater dinoflagellates, diatoms and -- dinoflagellates and diatoms, and the bacteria that would occur in -- that could affect the food chain of salmon and waterfowl and bats.

Thank you. Bye.

HEARING OFFICER: Thank you, Bonnie. We appreciate your comments.

The next hand that I see raised is for Frank -- and I apologize if I say this incorrectly -- Hudik.

Frank, we're ready to hear from you when you're ready. We'll do a quick sound check.

Hi, Frank. Can you hear me? And can I hear you?

So, Frank, you should be unmuted, and you should

be able to provide comment.

Frank, can you use the chat feature if you are unable to provide comment? We can see that you're unmuted. I can see your hand is raised. But I'm not sure that you can -- can hear me or that we can -- we certainly can't hear you if you're speaking.

I am monitoring the chat, Frank. I am not seeing you reaching out.

Kristen, if Frank is reaching out to you and you're trying to resolve something, can you private message me through the chat function, please.

All right, Frank. I'm hearing from Kristen, our Zoom host, that she is not -- Frank, I see you using chat to provide questions or comments. For the public hearing, we only take verbal comment, so you would need to ask those questions of the project team using your voice.

Are you able to -- are you able to do that?

FRANK EDWARD HUDIK: I hit the "unmute." Can you hear me now?

HEARING OFFICER: I can hear you, yes. Thank you, Frank. Good job.

FRANK EDWARD HUDIK: Okay. Okay. The "unmute" didn't unmute apparently.

Anyway, my question is, given tonight's

presentation -- thank you -- is there a supplemental to the budget? I mean, I've seen the last figures from a couple years ago. We were going over $350 million for the project. I'm very concerned about the impact on other aspects of the state budget, particularly K through 12, which is under a lot of duress right now.

I realize a lot of that's not part of this. But where -- where will the budget impacts of tonight's presentation be presented?

HEARING OFFICER: Frank, I appreciate you asking those questions. The team will respond to questions or comments on the environmental impact statement. We'll share some information at the end of the presentation where you can e-mail the project team with specific questions if they're able to answer them regarding the budget. But for now, we'll consider your comment as part of the comment that we are receiving tonight.

FRANK EDWARD HUDIK: Looking forward to it. Thank you.

HEARING OFFICER: All right. Did you have any other comments outside the budget comments related to the supplemental EIS?

FRANK EDWARD HUDIK: No. I tried to follow best -- best I could. And, you know, I've been

on this since day one, monitoring what's going on. And just -- I'm very concerned about the budget aspect of it, particularly now that there's additional changes.

HEARING OFFICER: Thank you, Frank. We appreciate you participating and your comments.

I am going to take a look. If there is anybody else that would like to provide a verbal comment tonight, this is your opportunity to do so. I'll give everybody about another minute to think about whether they'd like to do so. If I don't see any additional hands raised, I will go ahead and proceed to talk about the next steps and close the hearing.

So for folks that are in attendance, I will go ahead and move to close the hearing and wrap us up starting at 6:02 unless I see an additional hand raised.

All right, folks. We've got about 30 more seconds until the time switches over. Oh, it is 6:02. I'm going to go ahead -- this is your last call for you to raise your hand if you'd like to provide a verbal comment. And otherwise, I will talk about how you can submit written comments and close the hearing out.

I'm going to do one more scan. I am not seeing any raised hands. I'm going to go ahead and proceed with the hearing.

Perfect. Thank you for switching that slide.

We are going to tell you how you can submit written comments. If you would like to send Ecology and Department of Enterprise Services written comments, please remember that they are due by 11:59 p.m. on November 9th, 2026.

You would send those comments to the Draft Supplemental Impact Statement for the Deschutes Estuary at the Department of Ecology, Care of Bobbak Talebi at the Southwest Regional Office, P.O. Box 47775, Olympia, Washington 98504-7775.

You'll also see that information appear in your chat. You can also provide comments online using our e-comment form. For anybody that's joining us by phone, I'll go ahead and read that address out. It's https://ecology.commentinput.com/?id=buGTA658B.

All comments received at this hearing, as well as the in-person hearing that was held on October 28th, 2026 -- I am just receiving a message that we have had someone join and has raised their hand to provide comment. So I'm going to pause on closing out the hearing.

And, Lee, we're going to go ahead and unmute you and allow you to provide comment. Please go ahead.

LEE RINER: Can you hear me?

HEARING OFFICER: We can hear you. You are very muffled, at least to me. So if you could speak closer to the microphone, that might be helpful.

LEE RINER: Still muffled?

HEARING OFFICER: No. You're much better, Lee.

LEE RINER: Oh. Thank you. Thank you.

Well, anyway, I am part of the neighborhood association that's immediately next to Budd Inlet, the Northwest Neighborhood Association. And we're near Tugboat Annie's there on Budd Inlet. My husband and I have owned property there for 40 years, and we've spent many -- much of our lives kayaking and enjoying with our little sailboat. A lot of wonderful time.

And my concern about this discussion about the Deschutes Estuary tonight is multipronged. I know that in your initial opening statement for this hearing, you said that completing this project will resolve water quality issues.

I'm sorry. I have a different take on that. I know that the water quality issues in Budd Inlet are dire. They are severe. There's very low oxygen in Budd Inlet. We've seen the oxygen levels be depleted over the decades. Like I said, my husband and I've

been here 40 years.

We know that very low oxygen levels will affect the critters in Budd Inlet, the fish, the seals, the animals that inhabit our beautiful, beautiful water body here that we -- we love with all our hearts. That's why we're tuning in tonight on this issue.

So one of the issues that the Deschutes Estuary Project brings into play is, as you're saying, it will resolve water quality issues. I do not think it will, because I believe we still have toxic dioxin levels that are littered around Budd Inlet and also East Bay, which is right near Swantown Marina. I believe there are toxic hot spots there that leak into Budd Inlet proper.

And so we also have Moxlie Creek, which was put into a pipe. And as you know, Moxlie Creek historically came from Watershed Park. And many of us love Watershed Park. It's a beautiful place, up near Plum Street.

But anyway, Moxlie Creek came into Budd Inlet and was supplying freshwater, an estuary, and so we have now Moxlie Creek in a culvert. Many of us believe that this is bringing more toxins now down into Budd Inlet and further eroding the water quality.

And so when we talk about having the dam come out

and basically you say that there will be enough freshwater from the Deschutes, many of us question that, because we know there are toxic hot spots. And I do not at this point feel confident that the Port of Olympia will resolve these issues with these toxins, with these hot spots in Budd Inlet on West Bay and on East Bay.

Another issue that I'd like to bring up is that, as you know, the City of Olympia is currently going ahead with West Bay Yards, which is a large apartment house complex right there on Budd Inlet, right where the Deschutes dam, when you -- when it is open, when it is breached and the Deschutes River will then flow into Budd Inlet.

This West Bay Yards is going to be very, very close to the high-water mark of this whole area. So many of us are concerned that it looks like the City of Olympia is allowing this to go forward wherein they're going to have an acre and a half of fill dirt go in. And basically some of us think, is that going to really help the ecology of Budd Inlet?

I mean, please forgive me, but I think that this issue about -- I'm sorry. Did you say something?

HEARING OFFICER: I did. I just want to be mindful. I know that you have substantive

comments.

LEE RINER: Yeah.

HEARING OFFICER: And we had intended -- I wasn't sure you saw that the timer went off.

LEE RINER: I didn't see the -- I didn't see the timer.

HEARING OFFICER: I apologize. Well, we can give you another minute or so to wrap up --

LEE RINER: OKAY.

HEARING OFFICER: -- comment.

LEE RINER: Okay.

HEARING OFFICER: And just know you can provide additional comments in writing, that verbal comments and written comments are treated equally.

LEE RINER: Okay.

HEARING OFFICER: So we're really looking about for you to wrap up in about a minute.

LEE RINER: Okay.

HEARING OFFICER: Thank you so much.

LEE RINER: So I'll finish.

Essentially, I believe there's -- this thing about taking out the dam is a very, very complicated process. And I support taking out the dam. I want a restored

estuary. I believe restoring the estuary means not only restoring West Bay, but also East Bay, because they are connected water bodies.

So my concern is, is that we're -- this -- this discussion about Deschutes Estuary Project, taking down this dam, resolve water quality issues, I think that's highly questionable.

And I don't know. It says establishing important habitat for juvenile salmonoids by restoring saltwater marsh habitat. I have seen nothing about the discussion about eelgrass, planting the eelgrass. What about planting the eelgrass on the acre and a half of fill dirt that the City wants to put into Budd Inlet?

These are all very problematic. It's a very complicated issue. So I just wanted you to hear my words that, I'm sorry; this is not a done deal. We have a lot of outstanding issues, that people have spent their entire lives on this beautiful water body. We want to get it right.

We know this is $200 million project. We want to get it right. And, to me, I have not heard discussion about eelgrass, about actually these hot spots, about the pollution, about these issues. So I'm sorry. That's my comment. Thank you very much.

HEARING OFFICER: Lee, we really

appreciate you joining us and providing comment.

I am going to take another look about if there is anybody else here that would like to provide comment that hasn't had an opportunity to do so. And then we'll talk about what's going to happen with next steps and wrap up our evening.

So I'm going to take one more look. And, Kirsten, thank you for helping me notice that we had that hand raised.

I'm not seeing any more, so I'm going to go ahead and pivot back to closing the hearing out.

So I apologize for some of you that have been with us. I'm going to repeat some information that I previously shared. Let me just get my windows organized.

All right. As a reminder, you can submit written comments. Those written comments are due to Ecology and Department of Enterprise Services by 11:59 p.m. on November 9th, 2026. You can see information on your screen and in your comments on how you can provide comments by mail.

You can also use our online comment form, which I've already read for the record once. If anybody did not get that and they want to e-mail the project team, we'll be happy to get that to you.

And then if you have a QR reader, you can scan the QR code on the screen.

So all comments received at this hearing, as well as the in-person hearing that was held on October 28th, 2026, along with all written comments that are received or postmarked no later than November 9th at 11:59 p.m., will be part of the official hearing record for the draft supplemental environmental impact statement for the Deschutes Estuary Restoration Project.

The Department of Ecology and Department of Enterprise Services will respond to comments received when the final supplemental environmental impact statement for the Deschutes Estuary Project is issued.

Notice of the final supplemental environmental impact statement issuance will include everyone that provided written or oral comments on the draft supplemental and submitted contact information, everyone that signed in for today's hearing and provided an e-mail address, and other interested parties on the agency's mailing list for the proposal.

The final supplemental environmental impact statement for the Deschutes Estuary Restoration Project will contain a response to comments, and it will have the agency's response to substantive questions and issues of concern that were submitted during the public

comment period.

If you would like to receive notice but did not give us your contact information, you can e-mail the project team at DeschutesEstuary -- all one word -- @ecy.wa.gov.

The next steps in the process are that Ecology and the Department of Enterprise Services anticipate issuing a final supplemental environmental impact statement for the Deschutes Estuary Restoration Project in 2027.

On behalf of the Department of Ecology and the Department of Enterprise Services, we thank you for your interest and participation in this process.

Please let the record show that this hearing has ended at 6:15 p.m. on November 3rd, 2026. We'd like to thank you all for coming and wish you a good evening. Thank you.

(Hearing concluded at 6:15 p.m.)

STATE OF WASHINGTON)
